

Current status of LNG and other fuel alternatives in shipping

Dr Gerd Wuersig, Business Director DNV GL

The Initial Green House Gas (GHG) Strategy (MEPC.304(72)) also is a potential “game changer”

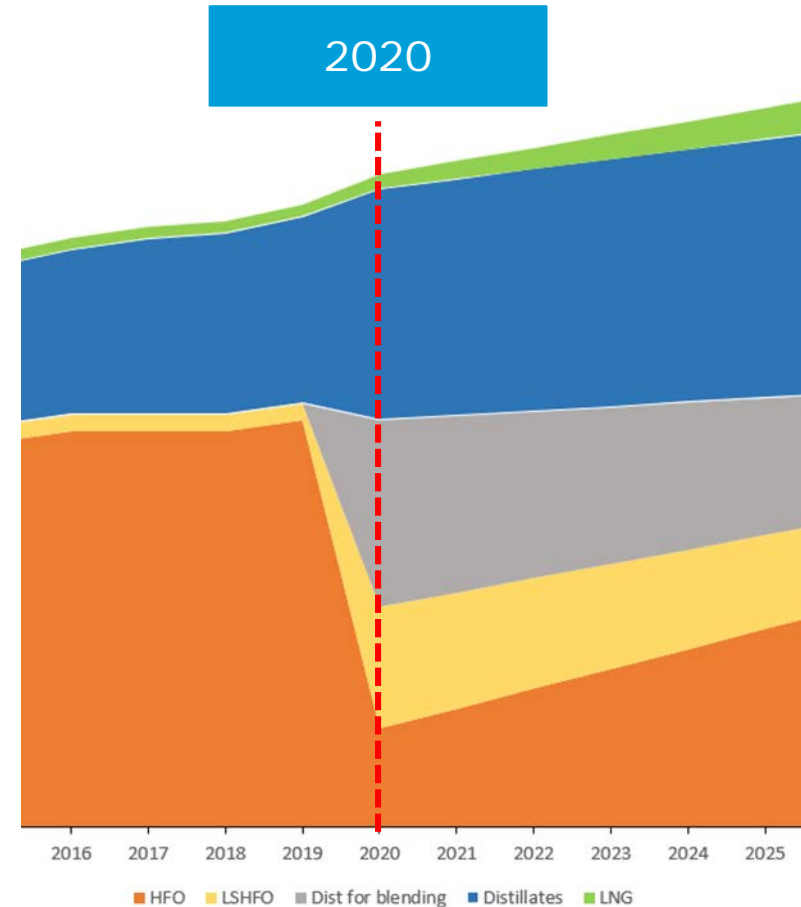

How will ship propulsion power look like in the future?

- "Paris Agreement", 2015-12-12 → UN's climate science panel says net zero emissions must happen by 2070 to avoid dangerous warming.; IMO ambition to reduce GHG emission by 50% within 2050 (April 2018)
- Until now there are no taxes on ship fuel.

The 2020 0.5% S effect on global bunker demand

- In 2020 LNG cannot play a major role (low no of ships)
- Distillates and LSHFO will take the role of high sulphur HFO
- High S HFO will drop dramatically
- Development beyond 2020 is uncertain

One possible global bunker demand

Alternative Fuels Insight

afi.dnvgl.com

Welcome to DNV GL's Alternative Fuels Insight platform

Map

Explore the development of bunkering infrastructure for alternative fuels. You can also see where ships using alternative fuels and technologies are already operating.

Statistics

Get detailed insights to the uptake of alternative fuels and technologies on ships. Filter on ship types, region, technology and more to create your own graphs.

Supporters

The AFI platform is made possible by co-funding from our supporters.

They include industry pioneers and market leaders who see the importance of alternative fuels in the maritime industry. Here you can learn more about them and get in touch with their experts.

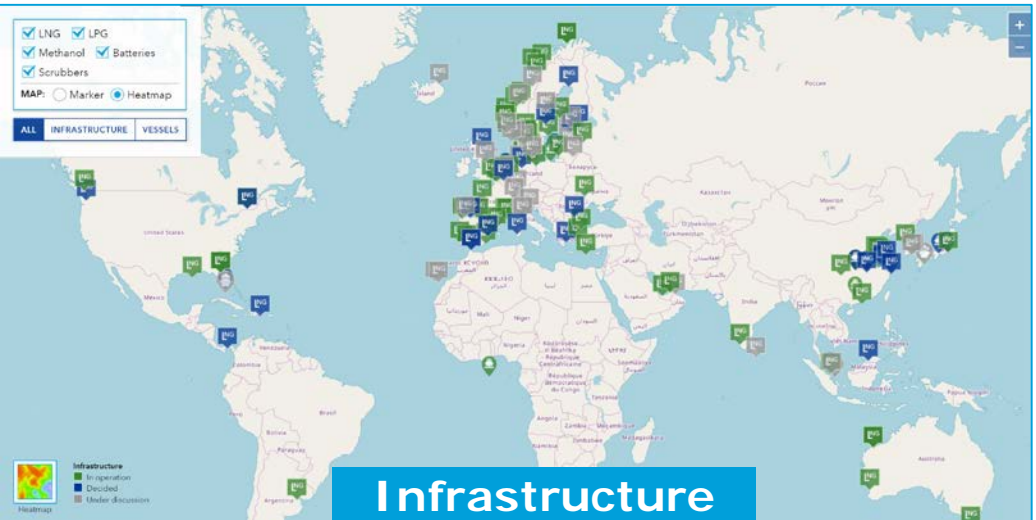

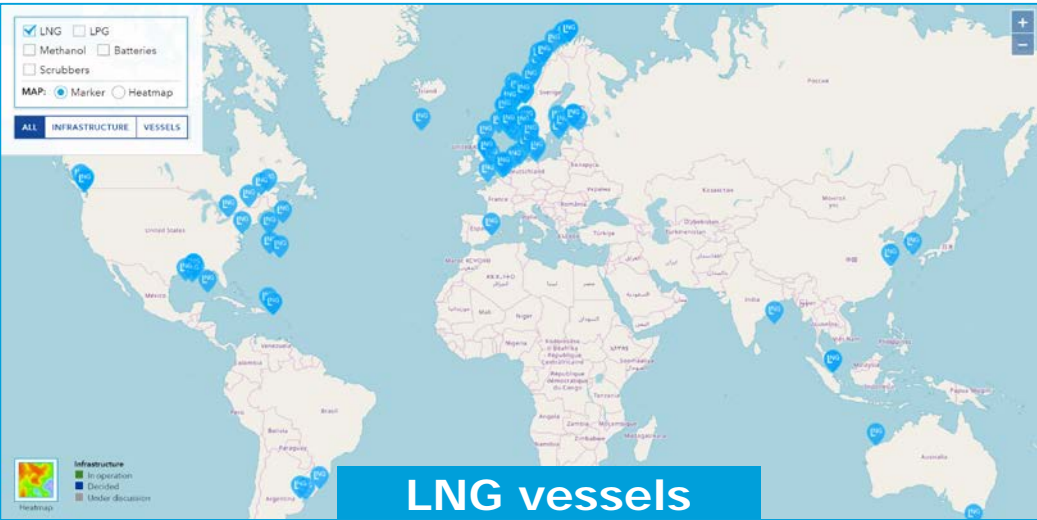

Fig. 2. CO2 equivalent emissions of fuel alternatives in shipping

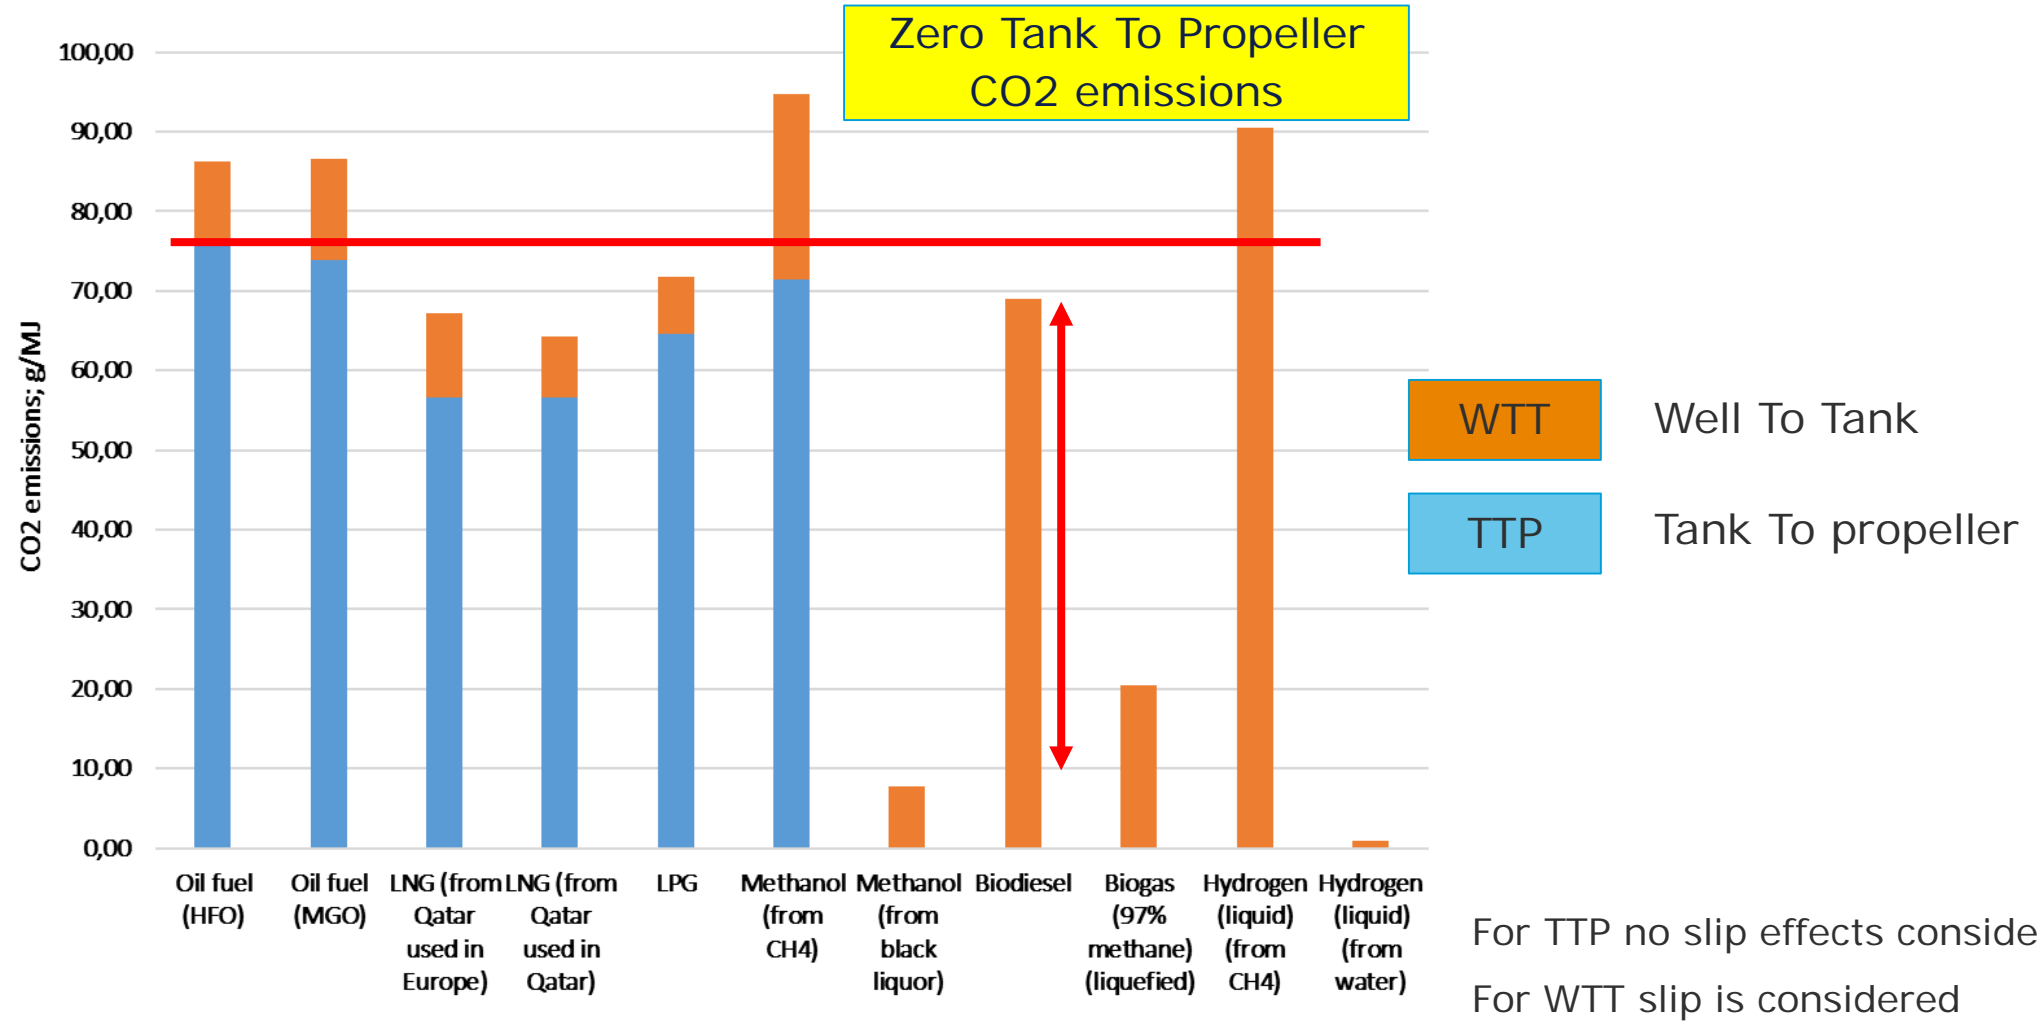

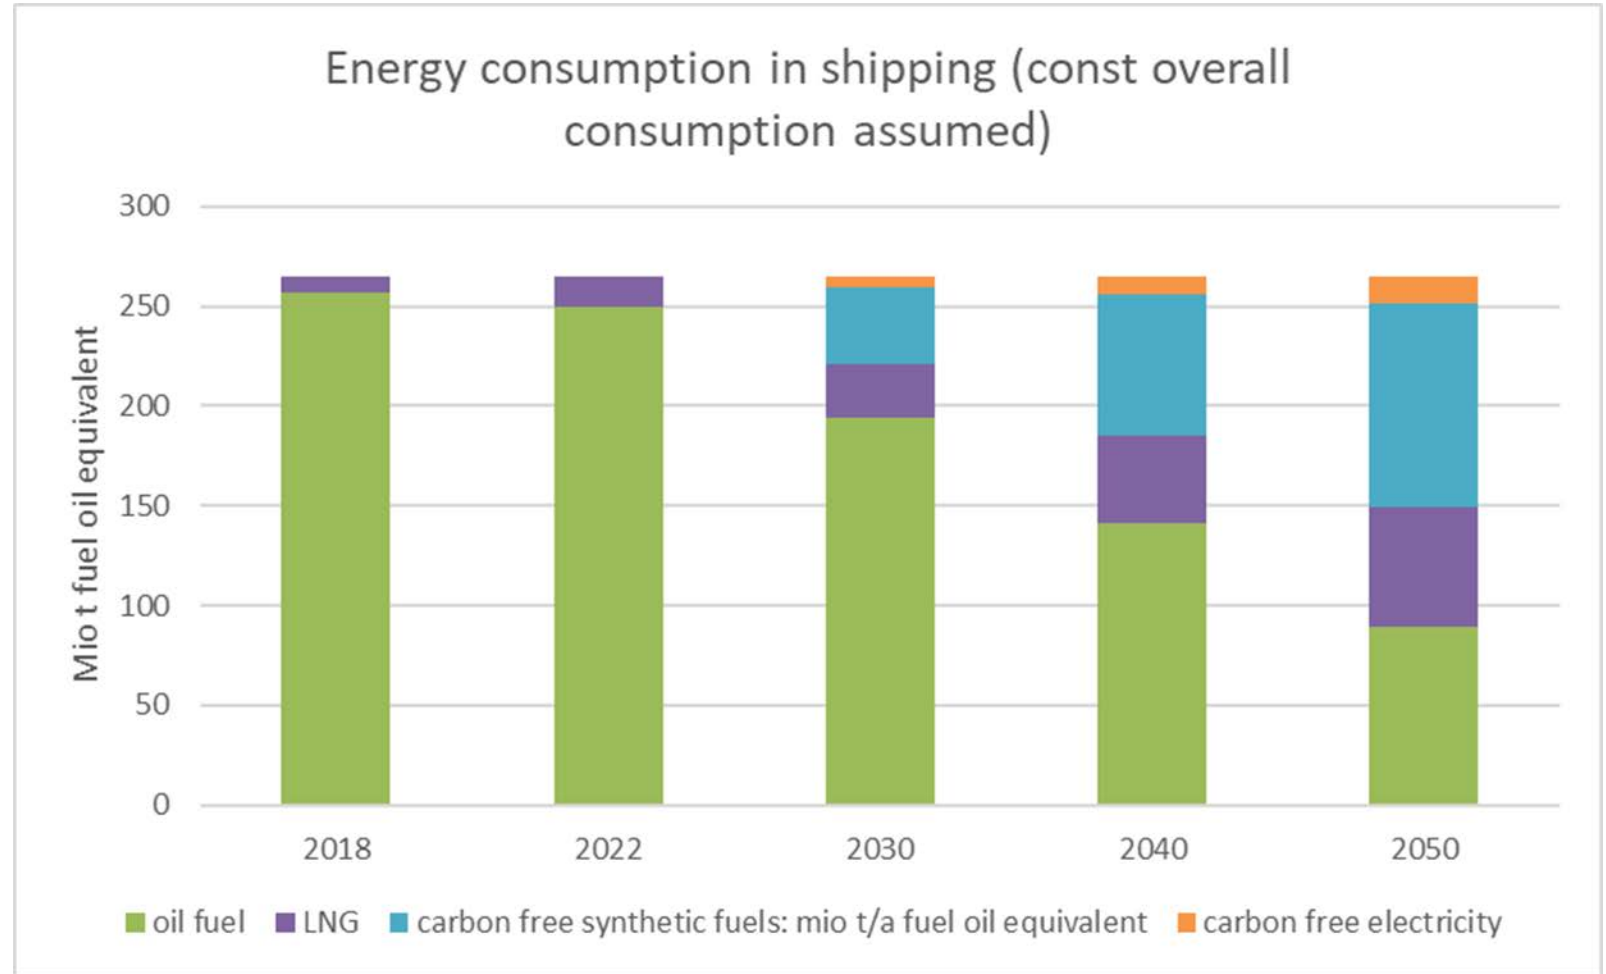

Fig. 1. Consumption figures for substitution of 50% oil fuel by PtoF

- Efficiency increase compensates growth in fleet only.
- Fuel supply for shipping: comp DNV GL ETO 2018
- Assumed: PtoF application starts “today”
 - PtoF: In 2030 approx. 38 mio t/a fuel oil equivalent might be needed!

Fig. 3. Fuel volume
- How much space future fuels will need? -

- Today's ship fuel has the highest volumetric energy density
- Hydrogen needs more than 4,5 times the volume of oil based fuel. → not suitable for deep sea shipping
- Other fuel alternatives are acceptable for deep sea shipping with regard to required volume

Reference energy density
